
Subject:

Log4Shell Critical Vulnerability

Hi Sir / Madam,

On the 10th December 2021, a critical vulnerability announcement was made in relation to Apache Log4j2 product and more specifically the Log4Shell, a Java-based logging tool.

The vulnerability allows for unauthenticated remote code execution and can be exploited via a malformed Java Naming and Directory Interface (JNDI) request.

This vulnerability has been categorised as CVE-2021-44228 in the National Vulnerability Database.

Red Box can confirm that Apache Log4j2 **is not deployed** within its **Quantify** product range and therefore **not** impacted by this vulnerability.

This includes both software and Red Box supplied physical servers.

Kind Regards,

Nadine Edmondson

Director of Product and Marketing Operations at Red Box
